
AirShield™ Elite/

Air Permeability + Durability

The same technology as Dry.Q™ but without taped seams

Perfect for down layers and sleeping bags—down stays dry, won't load with body moisture

“When you need a fabric that’s breathable but you want a little shell for when it’s snowing, I think AirShield, that’s the perfect compromise.” — Ueli Steck, climber

Instant-on windproof technology

AirShield™ Elite takes wind-protection fabrics to a new level of breathability. Unlike traditional windproof fabrics, AirShield Elite doesn't require body heat to trigger its breathability. It starts dissipating moisture the minute you put it on, before your body gets hot and clammy.

Instant-on technology means breathing starts immediately

Air-permeable construction maximizes body vapor outflow

Completely windproof
