

Q.Shield™

**Complements OutDry®
by keeping glove shell
fabrics and leathers
from wetting out.**

Permanently fused into the shell
materials—lasts for the life of the glove

Doesn't change the feel, texture
or breathability of the glove

"This stuff is amazing. We tested this on a Kleenex® and you can't get it wet. Q.Shield is a like a forcefield." — Dan Ramos, Mountain Hardwear Product Manager

Q.SHIELD™

**Keeps glove shell
materials light and dry.**

Q.Shield with ion-mask™ technology fuses extreme water repellency directly into shell fabrics. Q.Shield gloves repel water like a force-field.

Dunk a Q.Shield glove in water and it will come out completely dry. The treatment has no effect on feel or breathability and will perform for the life of the glove.

Water-shedding nanoparticles are fused into the glove's shell fibers.

Q.Shield doesn't change the texture or breathability of the shell material.

Q.Shield becomes incorporated into the shell and lasts the life of the glove.
